BAY HIGH TAKES THE HONOR. Defeats Gulfport's Husky Five in Basketball, by 34-6 Score Jan. 28, on Local Field.

Editor Sea Coast Echo: On Friday, January 28th, Gulfport High school was defeated by Bay High the final score being 34-6. Both teams were pretty well matched. Gulfport for weight and size and the "Bay" for celerity; but with the good work of R. Firsching, our jumping center, the ball was easily topped into Jackson's hands, and with a little passwork succeeded in getting the ball to Von Ehren, who stood by our goal watching his play. He was to quick for his guard and no more than five seconds after the whistle blew for the toss up, Bay

High had two points. This kept up and Gulfport ran fround the court looking for our Joys who easily dodged in and out amongst them. Firsching received a heavy blow nearly knocking him out, but you

ean't keep a good man down the "Randie" played the rest of game without a whimper. Gulfport's forwards could nething for B. Jackson and Sylvester guarded them so closely the first

half ended 18 to 12 in our favor. The second half seemed easy for our boys. Gulfport's inability to keep the ball in their possession proved all the more successful for our boys.

H Jackson shot goals from all an. gles of the court. Von Ehren shot five and Firsching two. Four fouls were called on the Bay thus giving Gulfport an opportunity for more points—only two were made-however.

The final score being 34-6. Lineup: H. Jackson, f. Firsching, c. Jackson, g. E. Sylvester, g. Subs_W. Lawrence for Ehren.

MELVIA NEICASE. Kiln, Miss., February 1st, 1921.

DEATH OF REV. BRO. STEPHEN As The Echo closes its forms this (Saturday) morning, announcement comes from St. Stanislaus College of the death last night of Rev. Brother Stephen, one of the oldest and best known teachers' not only in Bay St. Louis, but in the community of the Brothers of the Sacred Heart. Bro Stephen was one of the best known teachers engaged in the profession for over fifty years, and many men in prominent life today were pupils of his one of the best known Archbishop Shaw, of New Orleans. The funeral taken place this morning.

There being no news published from Kiln for the past two weeks, was due to the fact that we had nothing to write, and one reason we were busy getting lined up for our second term examination. Feeling that we are now reading for it in every respect we come again to tell of the happenings of our little town Johnson, on December 1st, 1915, to morning exercises is absurd.

official notice has been given out The men are urged to be economic and considerate during the time

PASS CHRISTIAN NEWS.

(From The Beacon,

A great deal of complaint is heard about the public not being able to learn from the telephone office the location of fires in town recently. There is no blame laid on the local made. It gave sus a better school employees, all of whom are most accomodating in all respects, but we are told that it is a rule of the company that forbids the giving of such information. If it is, we can say that it is a most aggravating one, and the local authorities lought to take the matter up with a view of having same corrected. This town tle one-room buildings, poorly is five miles long. People living in who had only finished the eighth either end are frequently in the cengrade. And in many instances the teacher was compelled to teach from the first grade thru the one she had

> A report from Washington of few days ago was to the effect that President Wilson will again visit the Pass for an indefinite stay. The report has not been confirmed so far as we can learn, but we not be surprised to have the President with us after the fourth of March. President Wilson was greatly benefitted by his stay at the Pass and he and his physician probably know of no other place that offer the advantages found here for rest and recuperation. We hope Mr. Wilson will come. He will find a cordial welcome, and the prayers and wishes of the community for a complete restoration to his former good health.

CANVED CHICKEN DELIGIOUS DISH

Cheaper and Easier to Can Surplus Fowls Than to Feed Them Until Wanted

EXCELLENT FOR EMERGENCIES

Two-Year-Old Hens Are Much More Desirable Product Than Six-Month-Old Chicken—Tests Made by Experimental Kitchen

A veritable friend in need to the busy housewife is canned chicken. A few jars of it on the storeroom shelf. which may be quickly converted into a delicious dish when unexpected company comes or when other emergendles arise, give the housekeeper a sense of preparedness. From an economic point of view, canning the surplus of the flock is an excellent

Severing the Leg From the Body at the Saddle Joint

practice, as it is cheaper to can the birds than it is to feed them until they are wanted for the table. Nor is it necessary to have young chickens for hens made a much more desirable canned product than a six-month-old

INDIVIDUALS DIFFER

...leken. The best products were obtained from plump, well-fed hens in tests recently made by the Experimental Kitchen of the United States Department of Agriculture

How the Canning la Done. To prepare the bird for canning, it should be carefully picked and all pin feathers removed; it should be then singed and washed in water in which a small amount of baking soda has been dissolved, Remove the entrails, cut the meat into pieces as for fry-ing, and carefully wash each piece in cold water. The giblets and excess intestinal fat should not be put into the Jars. The chicken may be partially cooked before being placed in the Jar, being either browned in fat or stewed, but the best results have been obtained when the uncooked chicken

was packed into the jars. The jars may be filled with het water or broth, or the meat may be canned without the addition of liquid. The best product has resulted when no liquid or only a small quantity (about 2 table spoons to a pint jar) was added. The meat in jars to which no liquid was added has kent as well as that in jars filled with liquid, and has possessed a superior flavor. The following method is therefore, recommended by the

Experimental Kitchen. Pack the pieces into pint jars. As much as a pound of chicken can often be packed into a pint Jar. Two chickens weighing, before dressed, a little over 4 pounds each, when cut up for canning will fill five pint jars. For example, jar 1 may contain a thigh, leg, filet of breast, and saddle; lar 2,

sufficient water to come 2 inches day," he said. above their tops. Process pint jars continuously for six hours after the water begins to boil. Seal the jars quickly upon removing from the boller, or if glass-topped jars fastened by a spring are used, force the spring into position while the jars are still immersed. After sealing invert the jars to test for leaks while cooling Reduces Time of Process.

If a steam-pressure cooker is used the length of time can be greatly reduced. Fifteen pounds' pressure for one hour has been found a safe and satisfactory period.

Chicken canned in either the water bath or pressure cooker is a desirable product, comparing very favorably with fresh chicken when used for chicken salad, creamed chicken, chicken stew, chicken pie, or for scalloped or baked dishes.

The chicken in a pint jar is sufficient to serve six persons when the meat is prepared in any of the way mentioned:

Each Person Should Experiment With Himself. injure a delicate color, use soapbark,

ON FOOD MATERIALS

Food Specialists Say Too Much Is as Bad as Too Little—Economical to Avoid Expensive Cuts of Meats and Fruits.

As the habits and conditions of individuals differ, so, too, their needs for nourishment differ, and their food should be adapted to their particular requirements. Each person should learn by experience what kinds of food yield him nourishment with the least discomfort, and should avoid those which do not agree with him. Too much food is as bad as too little, and occasions a waste of energy and strength in the body as well as a waste of nutritive material, say food specialists of the United States Department of Agriculture. While in the case of some foods as purchased, notably meats, some waste is unavoidable, the pecuniary loss can be diminished, both by buying those kinds hi which there is the least waste, and by utilizing more carefully than is ordinarily done portions of what is usually classed as refuse. Much of the waste may be avoided by careful planning so as to provide a comfortable and appetizing meal in sufficient amount but without excess.

home economics specialists of the United States Department of Agriculture. Soapbark, although not a soap, when heated in water will form suds. To prepare it for use, bdil for 10 minutes a cup of the bark with 1 quart of water; then cool and strain the liquid. The "soapy" water may be used full strength for sponging, or diluted for washing; half of this amount is enough for one-half tubful of water. Since the liquid is brownish, it should be used only on dark colored goods. Starch water is especially good for cleaning delicate cotton fabrics. This is usually made by adding thin starch paste to the wash water. Water in

which rice has been boiled, if it is not discolored, may be used instead, If it is not desirable to have the material starched slightly, it must be rinsed in salt water. Bran water, made in the same way as souphark solution, is useful with

Few Well-Cared-For Hotbed Sashes Are Good Money Makers on Any Farm.

COVER CROP IMPROVES SOIL

Rubbish, Dead Vines or Plants, Stakes and Poles Should Be Cleared Away and Ground Planted to a Green Crop.

the most profitable acreage on the investment are sometimes long defarm. Gardening really starts in the layed, so that progress cannot be acfall. When the last vegetables have curately measured by the amount of been removed and stored the prudent gardener sets about to prepare the ground for the next year's crop.

Clearing Away Refuse. Any rubbish, dead vines or plants, and bean poles or tomato stakes should be cleared away, says the United States Department of Agriculture, ind the ground sown to rye or some ther green crop to prevent the loose earth from washing under the winter rains. A cover crop also improves the phyiscal condition of the soil When a cover crop cannot be supplied the next best thing that may be done is to plow or spade the soll and allow It to lie rough throughout the winter. This practice destroys many insects that lie just below the surface. The

Hotbeds Furnish Early Vegetables at a Time When They Command Highest Market Prices.

winter frosts have a lightening effect upon the soil, especially on clay soils. The earliest and choicest vegetables are harvested by the man who maintains a few hothed sashes and uses them to start his garden. He is able to handicap the frost line by several weeks, and to set strong, well-developed plants in his garden at a time when his neighbors are planting seed The farm income is at its lowest point in the early spring, but it can be increased considerably by the sale of young plants grown in hotbeds and ready for transplanting. Tomato, cabbage, eggplant and pepper plants are alwliys snapped up when the first warm planting days come, and they are easily grown in the hotbed. A

little more space and a little more seed than the grower needs for his own use | Several Shocks of Corn Can Easily Be are likely to bring good profits. Before the ground freezes in the fall is a good time to clean out the old hot-

· Unless the soil used in the hotbed is to be exchanged for fresh earth it should be shoveled from the bed and tossed into a pile nearby. The decayed manure from the bottom is scattered over the pile and thoroughly mixed with it to form rich soil for next year's beds. Over this goes a coat of sfraw or leaves held down by bits of board to keep it from blowing. Sime farmers find it convenient to use evergreen boughs instead of straw for the outer covering.

Preparation of Hotbed. New hotbed pits should be dug so that they will face the south, and the location should be selected so that of corn can be loaded on this and the beds will be protected from the drawn to the feeding yard or barn. storms. Sometimes the earth taken the hotbed, but this is the exception rather than the rule: A few loads of Record Helps Farmer to Figure leaf mold from the woods mixed with the natural soil will often form smooth, rich stoneless mass which gives an ideal hotbed filler.

The back or north side of the frame is usually from 12 to 18 inches high, while the south end is about eight inches, so that the whole bed may have pitch enough to get the sun upon all In taking an inventory one should parts. The standard hotbed sash is include the value of the farm, live handled by most dealers, and measures stock, feed, machinery, cash on hand, three feet in width and six feet in and accounts receivable. Mortgages, length. A frame just wide enough to notes and other accounts payalle support the sash seems to be the most should also be listed. FARM INVENTORY IS INDEX TO PROGRESS

Practicable Way of Answering Important Questions.

Bulletin Recently Issued by Depart ment of Agriculture Enables Farmer to Determine Exactly His Financial Status.

What is the net worth of your farm ousiness? Is it more or less than one would imagine from a casual inspection of your farm? Do you know for sure whether you are going or coming in financial standing?

These are important questions to Whether it is conducted on an ex- the farmer, and questions that are not tensive scale to supply the market or so easily answered as would at first whether it is to produce food for the appear. Farming is an intricate busifamily the garden plot is likely to be ness, and one in which returns from money taken in a given time. Some times cash income may be almost wholly attributable to reduction in other assets, so that in reality the result is like taking money from one pocket and putting it in another,

The farm inventory, or property For list, offers the only practicable way of answering these questions. Once the farmer has made a complete list of all his assets and liabilities and has balanced them he knows just what his net worth is, and when he has made such a list annually he knows each year whether he has gone forward or back, and just how much has been the increase or decrease in the net worth of his business

The United States Department of Agriculture has just issued Farmers' Bulletin 1182 entitled Farm Inventories," in which are given detailed inany great use to the farmer.

Railroads Are Not Always At Fault When Trains Are Late

There are many things that make trains late things; unavoidable, because they cannot be foreseen and because they happen through combinations of circumstances over which nobody could have control Sometimes, it is the fault of the operating railroad; oftener not. As a matter of information to the public, a few of the main reasons for train delays are here given.

Waiting on Connections

Under mutual agreement and for the special benefit of through and trans-continental passengers, all railroads hold their through trains, either at the starting point or at intermediate connection stations for 30 minutes or longer. All such delays, combined, upset time tables and play havoc with running schedules, but benefit the public.

Delays in Handling Mails

Government regulations require that transfer mail must always be taken if the mail wagon or truck is in the station before the train has actually started to pull out. It often happens that a train is ready to go and on schedule time when the transfer arrives, and then it must wait until the mail is handled. In the long run, these wasted minutes aggregate into a serious loss of time.

Equipment Troubles

In spite of the fact that every railroad engine is given careful inspection upon its arrival in a roundhouse and again upon its departure from a roundhouse or yard, most equipment troubles which cause delay are due to some slight imperfection or breakage in the engine. It is just as impossible to prevent these engine troubles as it is to foresee and forestall machinery breakdowns in the average manufacturing plant. Parts apparently perfect which have been subjected to the most rigid inspection, will break and must be replaced. It is just the same with the railroad engine as it is with any other piece of machinery. All railroad equipment is given the same sort of inspection before it is put into service, and delays are very seldom caused by breakdowns or defects other than those that cannot be detected by careful inspection;

Weather Conditions

Snow, sleet, blizzards, fogs, floods, etc., causing blockades, landslides, washouts and congestions, are responsible for many delays. These happenings on any part of the line affect, of course, the whole line by deranging schedules, which must be adjusted promptly even under great difficulties. Safety is always the first consideration.

The L. & N. Railroad, running from the frozen North to the semi-tropical South. inevitably encounters a great many diffi culties developed by adverse weather conditions. No railroad is more diligent of its equipment or more efficient in overcoming these troubles than the L. & N., the management frequently being able to anticipate these conditions and to take effective troubleprevention measures.
